TO WHOM IT MAY CONCERN

Amcor commissioned Golder Associates Europe Ltd. and Geokrak sp. z o.o., Krakow in July 2003 to perform environmental investigations at our metal closures manufacturing site in Niepolomice Poland. The activities performed consisted of soil and groundwater investigations focusing on, among other things, petroleum hydrocarbon contamination and resulted in the remediation of the contaminated soils.

These activities were performed within budget and according to the specified scope of work and the standards required by Amcor.

Sincerely,

A handwritten signature in black ink that reads "NDavey".
